209 SS Hinge Conversion

Note: Hold Open has the grub screw on the top, and the Hold Closed has the grub screw on the bottom.

To convert the 209SS hinges from Hold Open to Hold Closed and vice versa, all that is needed is to move the small grub screw from one end to the other.

After removing the grub screw slowly turn the tension disc on the opposite end until you can see the threaded hole for the grub screw to screw into and insert the grub screw, taking care not to over tighten or cross thread the grub screw.
