

# Handy Hints

## **For the Repair of Small Chips and Imperfections**

Simply apply product with the brush. For larger chips, fill first with Plasti Bond or similar product. File flat, then touch up with Liquid Laminate.

Allow 12 hours to dry for a true colour match.

If a texture is required, simply dab with a sponge or cloth before dry. Repeat process if necessary.

## **To Improve Appearance of Laminate Joints**

Simply rub the product into the joints; allow to partially dry then clean off excess with damp cloth (*not wet*).

Alternatively, allow paint to dry completely then remove excess with thinners and clean cloth. Repeat process if necessary.

## **Colour Your Own Sealers**

Liquid Laminate will mix with acrylic based sealer. (*No More Gaps etc.*)

Just squeeze out the required amount of sealer, add a few drops of Liquid Laminate, then mix together with a spatula.

This is ideal for splashbacks etc.

# ACRYLIC LAMINATE TOUCH UP

For the repair of small chips and imperfections in melamine board and laminates.
