

## NEW FROM LOCKWOOD

### LOCKWOOD TWIN BOLT LOCK WITH EURO CYLINDER

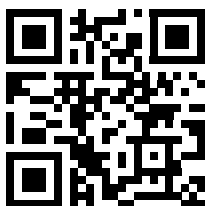

The new Lockwood Twin Bolt Lock (TBL) with Euro cylinder body has been designed for use on both French doors and bifold door applications. The Twin Bolt combines security features with a practical design, fulfilling the needs created by architectural innovations within the residential market. The Twin Bolt is suitable for use with aluminum framed residential doors.

The Twin Bolt Lock has 18mm shoot bolt throw as standard and a cam-over design that prevents the shoot bolts from being reverse driven even when the cylinder is not deadlocked. The locking version now uses genuine Euro cylinders, opening up options for greater customisation of keying ie. special keying, construction keying or master keying can be done.

- Upgraded through-hole mounting results in faster, simpler installation.
- One screw size fits most applications and full thread engagement allows for stronger handle connection to lock body.
- Non-handed lock assembly.
- Locked and unlocked markings on housing indicate correct handle orientation prior to installation.
- Twin Bolt features internal locking only.
- Standard rods provided are 1m + 1.3m with a range of extensions and accessories available.
- Provides 2-points of security with top and bottom rods.
- Zinc die-cast construction.
- Standard moulded plastic packers and fixing screws provided.

### LOCKWOOD LW9 PATIO SLIDING DOOR LOCK

The Lockwood LW9 is a new surface mounted, twin-beak patio sliding door lock incorporating sleek and modern styling with an innovative snib design that is both ergonomic and intuitive in operation.

This patented feature makes it easy and functional to use. The snib is a smaller handle inside the D-handle which unlocks the door when pulled in the opening direction and locks when pushed in the closing direction, so you can unlock-open and close-lock in one fluid motion.

- Achieves Australian Standards AS4145.2-2008 with higher strength and durability ratings.
- Features twin locking beaks for added security.
- Dual select locking function for day latching and deadlocking.
- Door Close Detect (DCD) anti slam feature protects from accidental damage and ensures door is closed before being latched or locked.
- Black, silver and white powdercoat finishes available.
